Asperger's syndrome is a disorder characterized by some of the features of autism, such as abnormalities of social interaction and repetitive and stereotyped interests and activities, but without the delay of retardation and cognitive development that is seen in true autism (Reber & Reber, 2001). This syndrome is very similar to that of autism, but the normal development of both speech and motor skills distinguish it from autism (Tilton, 2004). The syndrome is also marked by poor arithmetic skills, an impaired sense of humour and difficulty in comprehending the gestures of people around them. Barlow & Durand (2005) indicate that the child with Asperger's syndrome usually has an average IQ, with relatively little cognitive impairment; and imply that Asperger's is not a separate disorder from autism....
