The branch conductors should have a carrying capacity about fifty per cent. in excess of the normal current required by the lamp. They should be furnished with only such resistances or regulators as are enclosed in non-combustible material, such resistances being treated as sources of heat. Incandescent lamps, however, should not be used for this purpose. All such arc lamps should be supplied with globes and protected by spark arresters and wire netting around the globe. Outside arc lamps should be suspended at least eight feet above sidewalks. Inside arc lamps should be placed out of reach or suitably protected. Lamps when arranged to be raised or lowered, either for carboning or other purposes, should be connected up with stranded conductors from the last point of support to the lamp, when such conductor...
