RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 62 pages. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1967 Excerpt: . . . radioactivity indicate the amounts of certain elements present in the area being tested. An instrument for performing in situ analyses for silver is now operational and one capable of detecting gold is being developed. New sampling equipment and methods are essential to the success of the Heavy Metals program since accurate sampling is the vital link between finding targets and developing an actual resource. In recent years one of the most interesting and novel developments in drilling has been that of vibratory-resonant drilling. This concept, which consists of vibrating the drill rod rather than pounding it, has increased the speed of drilling considerably in soft and unconsolidated materials. This type of drilling was developed by a totally owned subsidiary of the Shell Oil Company and is being used commercially in driving piles. Experimental units have been developed for drilling smaller diameter holes. The Bureau of Mines has cooperative agreements to test this concept of drilling and recovering cores during an Alaskan cruise this summer by its marine mining research vessel the RV VIRGINIA CITY. Another unit has also been purchased to test in-land deposits. An interesting new sampling device that is being developed by the Bureau is a portable X-ray probe that can be lowered into small diameter drill holes to determine the presence of gold or silver. Such a device would be invaluable as a means of improving efficiency in sampling techniques. The Bureau of Mines has pioneered statistical sampling techniques over the past few decades and is presently further...
