## Mathematical questions and solutions Volume 6

By -

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 32 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1866 Excerpt: . . . of two of the diagonals of the same complete quadrilateral. Prove that if O O<sub>2</sub>, O<sub>3</sub> are their other points of intersection, then O O<sub>1</sub>( O O<sub>j</sub>, O O<sub>3</sub> are the tangents to the three conies at O. I. Solution by J. Dale; H. Tomlinson; and others. Let AA, BB, CC be the diagonals of the quadrilateral; A, B, C being collinear vertices; and O the common point. Draw the lines AOM, cutting BC in M; COL, cutting AB in L; and LNMP, cutting BC in N and AC in P; also join ON, PB, and produce these lines to meet in O<sub>3</sub>. In the hexagon AABBOO, the lines OA, BA; AB, O<sub>3</sub>B; BA, O<sub>2</sub>O intersect in the collinear points M, P, N; therefore, by Pascals theorem, O<sub>2</sub> lies on the conic AABBO. In the hexagon BBCCOO<sub>2</sub> the lines OC, CB; CB, O<sub>2</sub>O; BC, O<sub>2</sub>O; intersect in the collinear...

### Reviews

*This ebook can be worthy of a read, and much better than other. I have read and i am certain that i am going to planning to go through again once again in the future. You may like just how the writer compose this book.*

-- **Mr. Grant Stanton PhD**

*A whole new eBook with an all new standpoint. It is actually rally fascinating throgh reading through time period. You wont truly feel monotony at anytime of your own time (that's what catalogues are for relating to when you request me).*

-- **Claire Bartell**
